Subject: Pole Mounted Installations

Julia,

This is to inform you that all pole mounted facilities Citywide shall be no lower than ten (10) feet minimum above ground level. We have already discussed almost three dozen locations in the North San Fernando Valley and it is my understanding that those are already either moved to a higher installation or are in the process of such. If any other locations that are closer than ten feet from ground level, then those need to be moved accordingly. Also, please plan no new installations of this configuration anywhere within the City of Los Angeles boundaries.

Any deviation from these standards will require clearance from the Telecom-AGF Section.

This is not only the message given to us by the Neighborhood Councils and the City council Office, but it is also the opinion of the City Attorney's Office that this is necessary for the city to assure pedestrian safety.

Thank you.

Carl Mills, P.E.
